

Q1 // Magic Word

This one time, Anish accidentally hit his head on a pole. As a result, his brain turned a little funky. After going to the nurse's office, they discovered something strange: Anish could only understand words if they had the letter "a" in them. Make a program that outputs "Understandable" if Anish can understand the word, and "Incomprehensible" if Anish cannot understand the word.

Input Specification:

The first line will contain a string S, indicating the word Anish is trying to understand.

Output Specification:

Output "Understandable" if the word has the letter "a" in it, or "Incomprehensible" if the word does not have the letter "a" in it.

Sample Input 1:

```
apple
```

Sample Output 1:

```
Understandable
```

Sample Input 2:

```
eggs
```

Sample Output 2:

```
Incomprehensible
```
