

J1 // Contest Grading

Everyone has just finished AMC 12B and AMC 10B this morning, and Mr. Ing must start marking so he can send all contests to the math committee. Due to the laziness of the Seniors and their lack of motivation to help mark, score, and record, Ing decided to take this into his own hands and made a program to mark. Thankfully, he made everyone fill their answers onto a scantron so he receives an electronic copy. Your job is to determine the score that person got.

Answer Key: **CCEBCDBCEEBBBBDBDDCADBABC**

Input Format

The first line of input will contain the name of the person who wrote on the scantron.

The next **25** lines of input will contain an answer of multiple choice (**A,B,C,D,E**), where the **n**th line would be the answer to the **n**th question. An answer that is **BLANK** means the person left that question unanswered.

Output Format

Output the score the person got as "name got a score of **x**.", with **x** as an integer.

Scoring Format:

There are 25 questions on the AMC and they are all multiple choice. Correct answers are worth 6 points, incorrect answers are worth 0 points, and unanswered questions are worth 2 points.

Sample Input

Meghan
